

## Reflecting on 2025

**As we wrap up 2025 and look forward to 2026**, it's incredible to reflect on how far Technophar, as a team, has pushed the boundaries of soft gel manufacturing technology. This past year was marked by innovation, with upgrades to our Universal soft gel machines for both animal and plant-based soft gels, and by efficiency gains to keep up with demand, which solidified our position as one of the industry's leading soft gel machine, dryer, and auxiliary equipment suppliers.

### TES Main Highlights:

#### 1. Soft Gel Machine Performance

We continue to roll out enhancements across our encapsulation systems and auxiliary equipment, including gel and fill buffering systems and plant-based metering systems. These improvements aim to enhance precision, throughput, and overall reliability for our clients worldwide. Our focus on automation and smarter controls establishes a new benchmark for what soft gel production equipment can achieve.

#### 2. Global Footprint Expansion

We strengthened our presence in key markets, secured partnerships with high-volume nutraceutical and pharmaceutical manufacturers, and successfully installed systems across multiple continents. We also focused our efforts on Asia, establishing new partnerships across Japan, China, and India. This growth not only expanded our customer base but also boosted our global network.

#### 3. Engineering Excellence

Our engineering teams delivered significant upgrades — improved temperature control for plant-based gel using our TESVgen metering pump, TESVgen closed boxes, and hoses, and improved animal gel mass through our buffer/pumping systems. As a result, these advancements directly improved customers' production yields and return on investment (ROI).

#### 4. Shaping the Future of Softgel Equipment Technology

With rising consumer preference for vegetarian and vegan products driving demand for more plant-based alternatives, Technophar expanded its portfolio this past year to offer new veggie applications based on Roquette's Lycigel®, Verdigel™ SC, and SeaGel®.

This coming year is bursting with opportunity, and we're stepping into it with collaboration and momentum.

## In 2026, we'll be focused on:

- Advancing automation.
- Expanding turnkey soft gel production solutions.
- Strengthening global service and training programs.
- Introducing more of our NextGen soft gel encapsulation technologies.
- Further building partnerships through global events, open houses, and strategic initiatives.

We are committed to helping clients achieve higher output, greater consistency, and lower operational costs than ever before. With that commitment in mind, we'd like to take a moment to thank our partners, clients, and dedicated team for their contributions in making this year's success possible.

**Wishing everyone a wonderful holiday season and a great start to 2026!**

Warm Wishes,

*Paul Lukas*
